

**EDUCATION, HEALTH AND ECONOMIC DEVELOPMENT:
A SURVEY OF QUANTITATIVE ECONOMIC STUDIES,
2001-2009****GUISAN, Maria-Carmen***

Abstract. We analyse the relationships of health, education and income per capita in developed and developing countries in year 2005, as well as the main conclusions of more than sixty studies published by our Association for the period 2001-2009, applied to OECD countries, Latin America, Africa, Asia and World comparisons. We analyse the relationship between Years of Potential Life Lost (YPLL) and health expenditure per capita in OECD countries and the conclusions show that the initiatives to increase coverage of health care to all the population in the United States is an important step to lower the relatively high value of YPLL in this country in comparison with other developed countries of Europe and other areas. Regarding developing countries we call attention to the role education to achieve the Millennium Development Goals (MDGs), and thus recommend to increase international cooperation.

Keywords: Health Expenditure, Education and Development, YPLL
JEL Codes: I0, I1, I2, O51, O52, O53, O54, O55, O56, O57

1. Introduction and World comparisons

In this section we present data and studies related with World comparisons. Section 2 present a comparison of OECD countries and sections 3 to 5 a summary of studies related with Latin America, Africa and Asia. Most of the cited articles are free downloadable at the journals Websites with links from the on line Annex.

Education and health expenditure are highly correlated because more educated population usually contributes to increase real Gross Domestic Product (GDP) per capita, through several causal relationships as those analysed in Guisan, Aguayo and Exposito (2001 a), Guisan and Neira(2007), Guisan(2009) and other studies.

Other World comparisons which present interesting empirical evidence are, among others, the following ones:

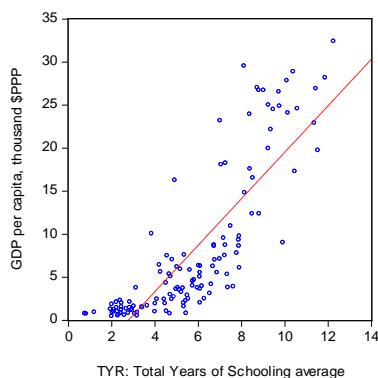

* Maria-Carmen Guisan, Profesor of Econometrics, Faculty of Economics.
University of Santiago de Compostela (Spain), mcarmen.guisan@usc.es

Guisan, Aguayo, Exposito (2001 a) estimate cross-country models of Education, Industry and Fertility, which show the important impact that education has on the moderation of high fertility rates and for economic development. Guisan, Aguayo, and Exposito (2001 b) present a general view of the evolution of World education and development during the 20th century. Di Pietro (2006) analyses Income per capita, health and cross country IQ. Miles (2003) present a quantile regression approach to education and development.

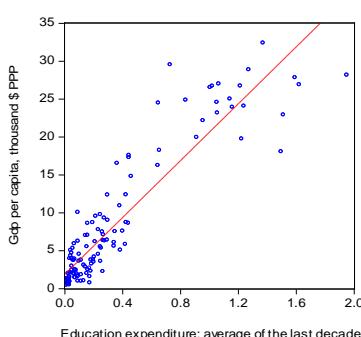

In the Annex we include a summary in English of some interesting studies published in Spanish, including: Guisan and Neira (2001) and Neira(2007).

Graphs 1 and 2 show the positive impact of education on GDP per capita and table A1, in the Annex, presents correlation coefficients between the stock of human capital and economic development, generally represented by Gross Domestic Product (GDP) per capita.

Graph 1. Years of Schooling and GDP per capita in 132 countries, year 2000

Graph 2. Past expenditure in Education and GDP per capita

2. Education, Health expenditure and YPLL in OECD countries

Table 2 presents education and health expenditure in OECD countries in year 2005, expressed in dollars at 2005 prices and PPP, and table 2 shows the percentage of health and education expenditure on real GDP together with some indicators of health assistance related with years of potential life lost (PYLL or YPLL) for male, female and general population (see definition in footnote of table 3).

Source: Note: Data of years around 2005 for YPLL (years of potential life lost from OECD data, for people dying below 70 years old), except in Belgium 1999. Not available data for YPLL in Turkey (likely similar to those of Mexico). YPLLM (male), YPLLF (female). % H+E is the sum of % of Health and Education expenditure per capita on GDP per capita.

Graphs 3 and 4 show the important impact of health expenditure in the diminution of both male and female values of YPLL per one hundred thousand inhabitants, elaborated from OECD data.

Graph 3. Health expenditure and years of live lost in OECD: YPLLM

Graph 4. Health expenditure and years of life lost in OECD: YPLLF

Graph 5 shows the positive relationship between Health Expenditure and real GDP per capita of OECD countries in year 2005

Graph 5. Health expenditure and GDP per head, OECD countries, 2005

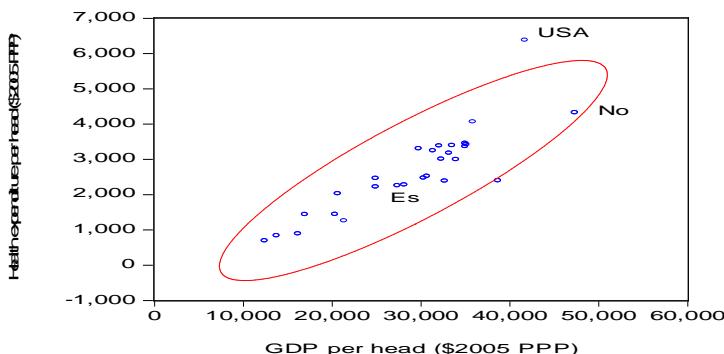

Table A2, in the Annex present the correlations between the variables and table A3 to A5 estimated econometric models.

GDP per head is in the range 10000 to 50000 dollars, and health expenditure between 500 and 7000 dollars. The most outstanding countries in both variables were Norway (No) and the United States.

The United States has reached very high standards of health average expenditure and quality but YPLL and other indicators do not perform as well as in other developed countries, due to the limitations in coverage of health assistance to poorest social groups. There are positive initiatives from Government to develop a mix of public and private policies for health assistance of all social sectors.

Other interesting studies published in English by our Association related with the positive role of education are the following ones:

Cosar and Bilidirici(2005), presents a comparison between Turkey and other OECD countries for the period 1960-2000, and recommend increase of expenditure in education in Turkey in order to reach a higher degree of convergence with economically more developed countries. Crespo and Fontoura (2006) analyze the relation between human capital and development in Portugal. Caruso and Palano (2005) analyse the positive effect of regions with higher degrees of support to universities and research in several European countries, including Italy, Spain and Germany.

Guisan (2009) presents a synthesis of the main factors of economic development and an analysis of European Countries in Comparison with the United States and Canada, 2000-2007. Guisan (2004) presents an inter-Sector Econometric Model of 151 European Regions, 1995-2000. Guisan and Aguayo (2002), (2003) analyse the evolution of education and development in the United States, Canada, Mexico, Europe and other countries in 1980-99. Guisan and Arranz (2003) present the estimation of econometric models of health expenditure in OECD countries, 1970-96.

Korres, Chionis, and Staikouras, (2004) present an analysis of Regional Systems of Innovation and Regional Policy in Europe. Vieira, Vazquez-Rozas and Neira (2008, analyse the Innovation Factor in the Productive Process: Comparative Study of European Nuts, II 1995-2002, and Guisan (2005) analyses Universities and Research Expenditure in Europe and the USA, 1993-2003. Pereira, Martins, and Martins (2007), present an interesting analysis, based

on surveys, about the important question of Ethics and Wellbeing in Institutions, in Universities of Portugal, Cape Verde and the UK.

2. Education, health and development in Latin America

Some interesting studies published in English are the following ones:

Guisan, and Aguayo (2001) and (2002) relating educational level with fertility rates, production by sector and per head and economic Development in America. Guisan and Aguayo(2007) analyse education, health and poverty in Latin America. Lamelas (2004) analyses the evolution of structural female employment and higher education in Venezuela, 1975-2000.

In the Annex we include an English summary of many interesting articles on Latin America published by our Association in Spanish:

Aguayo and Lamelas (2003) analyse factors that explain years of life expectancy in MERCOSUR countries, 1970-2000. Berumen (2005), elaborates and analyses and index of quality of life in Guatemala (PQIL). Canudas (2001) presents an econometric study of the positive impact of education on industrial productivity in Mexico, 1960-93. Carton and Slim (2008) analyses regional convergence in Mexico.

Cartagena (2003) analyses education and intergenerational mobility in Colombia, 1929-1996, Cerno (2002) presents an econometric study relating education and life standards of families in the North East of Argentina. Fernandez and Fernandez, (2006) inquire about the systems of higher education in Latin America and the financial effort. Gimenez (2008) presents an analysis of development factors in Latin America through cluster analysis.

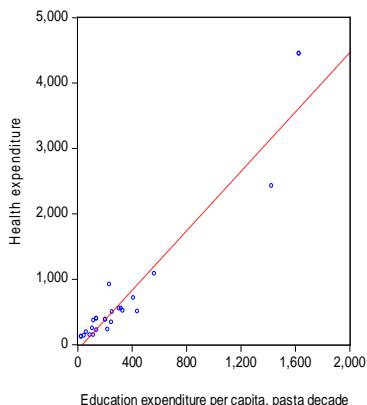

Guisan and Aguayo, (2002) analyse the evolution of education and development in Latin America for the 20th century and challenges for the 21st century. Lamelas (2007) presents and overview of education indicators of Brasil at national and regional level. Lamelas and Cancelo (2003) present an econometric analysis of the impact of education in the diminution of children mortality in the Andean Community Countries, for the period 1960-2000, Martin-Arnaiz(2007) analyses the relationship between education and competitiveness in Latin America, and Neira, Aguayo and

Exposito(2001) show the positive impact of human capital in Latin America for the period 1965-90.

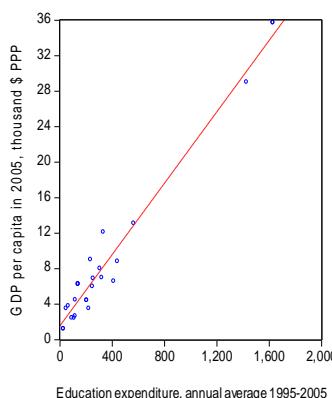

In spite of the already low level of expenditure per inhabitant in education in many Latin American countries, important advances for the period 1990-2008 have increased production per head and paved the way for future advancements in economic development and health welfare. Unfortunately a few countries, like Haiti, have not yet experienced a great advanced in the total years of average schooling of population and need urgently international cooperation in this regard, similarly to the poor countries of Africa and Asia

Graph 6 shows the positive impact of past education expenditure on current health expenditure per capita, and graph 7 the impact of past education expenditure on GDP per capita, in America.

Graph 6. Health and past Education expenditure: America

Graph 7. Development and past Education expenditure: America

The highest levels correspond to the United States and Canada, and we may notice that Latin American countries are already very far from reaching development levels of both countries. It is recommended an increase of support to education in Latin America, together with other factors, in order to foster convergence towards the high levels of the more developed countries.

3. Education, health and development in Africa and Asia

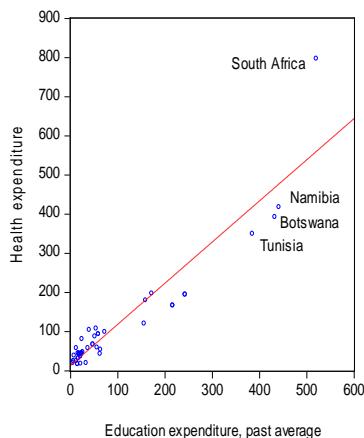

Some interested articles published in English are the following ones:

Amaghionyeodiwe and Osinubi (2007) inquire about Higher Levels of Schooling and Higher Returns To Education In Nigeria?, Jaunky, and Khadaroo 2009) analyse health care expenditure and GDP in Africa. Osakwe (2007) analyses primary commodity and manufacturing exports in Africa, 1992-2002 in relation with foreign aid, geography and education. Guisan and Exposito (2001 a) and (2002), analyse the evolution of education and development in African areas and countries for the last decades of the 20th century. Guisan and Exposito (2005) estimate some econometric models that relate education and development in Africa for 1950-2002.. Guisan, M.C. and Exposito (2009). present a cross-section econometric model of 39 countries in 2000-2005 to explain the positive impact of Education to foster development and health expenditure in Africa.

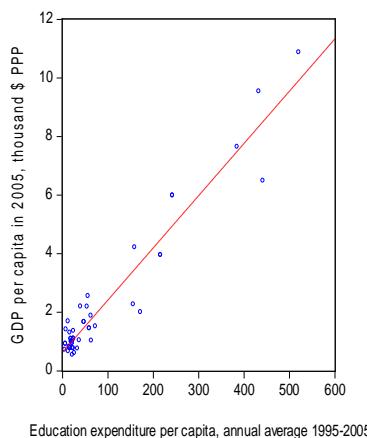

In the Annex we present a summary in English of some interesting article published in Spanish on Africa, including the following ones: Guisan, M.C. y Exposito (2001 b) and (2006).

Graphs 8 and 9 show, respectively, the positive impact of past education expenditure on current health expenditure per capita and GDP per capita in African countries.

Graph 8. Health and past
Education expenditure: Africa

Graph 9. Development and past
Education expenditure: Africa

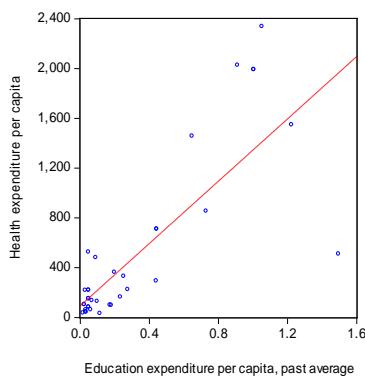

4. Asia and Pacific.

Some interesting studies published in English are the following ones. Guisan and Exposito (2003) on education and development of Asia-Pacific countries in 1980-99. Guisan (2004) estimates some econometric models of human Capital, trade and Development in India, China, Japan and other Asian Countries, 1960-2002. Mukherjee, (2006) analysis the positive impact of education and development on health in India with “A Note on Polio Count”.

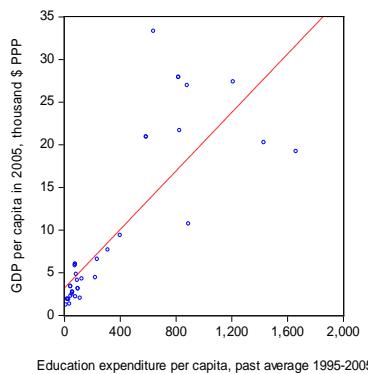

The Annex includes a summary in English of articles published in Spanish: Guisan and Exposito (2008) on Philippines and Guisan, Cancelo and Exposito (2007) on China, India.

Graph 8 shows the positive impact of past education expenditure on current health expenditure per capita, and graph 9 the impact of past education expenditure on GDP per capita, in Asia and Pacific.

Graph 6. Health and past Education expenditure: Asia

Graph 7. Development and past Education expenditure: Asia

Annex (to be updated with summaries in English of cited articles published in other languages)

Correlations: Gross Domestic Product per capita and education

Table A1. GDP per capita (PPP) and Education in 132 countries, year 2000

Correlation	GDP per capita
Total years of Schooling of population over 15 year old	0.8318
Public education expenditure per capita, last years	0.9183

Note: TYR total years of schooling, based on Barro and Lee's data and some own estimations for some missing data. Public education expenditure is annual expenditure per capita for the previous decade (1990-1999) applying the percentage of GDP devoted to public education to GDP per capita in \$ at Purchasing Power Parities (PPP). Own elaboration from WB and other international sources.

Correlations: Years of Potential Life Lost and other variables

Table A2. Correlations of Potential years of life lost with Education, Expenditure and GDP per capita, OECD countries year 2005

	YPLL F	YPLL M
YPLL F	1.0000	0.8884
YPLL M	0.8884	1.0000
Education Expenditure per head	-0.3950	-0.6025
Health expenditure per head	-0.2980	-0.4880
GDP per head	-0.5321	-0.7183

Note: Data of tables 1 and 2 (excluding Luxembourg, given that GDP per capita in this case overvalues real income per capita, and Turkey due to missing data). Data of Education expenditure, Health expenditure and GDP per capita in \$ at Purchasing Power Parities (PPP). YPLL: years of potential life lost (f: female; m: male).

*Econometric models: cross-section sample
of 28 OECD countries in year 2005*

Variables:

YPLL: Years of potential life lost per 100 thousand people of female population living less than 70 years.

YPLM: Years of potential life lost per 100 thousand people of male population living less than 70 years.

HEALTHH: Health expenditure (public and private) per capita.

GDPH05PP: Gross Domestic product per capita (th \$ PPP)

Source of data: Tables 2 and 3, elaborated from OECD statistics and other international sources.

Note: Data of HEALTHH AND GDPH expressed in thousand dollars at Purchasing Power Parities (PPP).

Table A3. Health Expenditure per capita and GDP per capita

Dependent Variable: HEALTHH. Method: Least Squares. Observations: 28				
Variable	Coefficient	Std. Error	t-Statistic	Prob.
GDPH05PP	0.094569	0.004049	23.35563	0.0000
R-squared	0.708817	Mean dependent var	2685.143	
Adjusted R-squared	0.708817	S.D. dependent var	1202.129	
S.E. of regression	648.6855	Akaike info criterion	15.82283	
Sum squared resid	11361408	Schwarz criterion	15.87041	
Log likelihood	-220.5197	Hannan-Quinn criter.	15.83738	
Durbin-Watson stat	1.570519			

Table A4. YPLLF and Health Expenditure per capita (female)

Dependent Variable: YPLLF. Method: Least Squares. Observations: 28				
Variable	Coefficient	Std. Error	t-Statistic	Prob.
HEALTHH	-0.181806	0.114228	-1.591608	0.1236
C	3034.819	335.0506	9.057794	0.0000
R-squared	0.088781	Mean dependent var	2546.643	
Adjusted R-squared	0.053734	S.D. dependent var	733.4989	
S.E. of regression	713.5197	Akaike info criterion	16.04705	
Sum squared resid	13236871	Schwarz criterion	16.14220	
Log likelihood	-222.6587	Hannan-Quinn criter.	16.07614	
F-statistic	2.533217	Durbin-Watson stat	1.535988	
Prob(F-statistic)	0.123559			

Table A5. YPLLF and Health Expenditure per capita (male)

Dependent Variable: YPLLM. Method: Least Squares. Observations: 28				
Variable	Coefficient	Std. Error	t-Statistic	Prob.
HEALTHH	-0.673874	0.236391	-2.850670	0.0084
C	6708.198	693.3767	9.674680	0.0000
R-squared	0.238125	Mean dependent var	4898.750	
Adjusted R-squared	0.208822	S.D. dependent var	1660.075
